

Maggie Hermanson  
WRA 210  
Prof. C Daniels  
Module 1  
January 13, 2014

1. Web hosting, web design, and a domain name.
2. Local files are files that aren't necessarily available to the public, probably located on a single computer as opposed to reserved space on a server. Web servers are storage places for files in order for them to be accessible to people through the internet. FTP (File Transfer Protocol) is the way in which files are transferred to web servers in order for them to be widely available.
3. AFS Space is server space for files that need to be saved to a student's account without compromising the memory space in that student's computer. It allows a separate server space for files so they can be used on multiple computers with access to AFS Space.
4. `/afs/msu/user/h/e/herman36`
